

COSMETICS

Range of high-performance rheology modifiers

IgcAR develops a range of solutions designed to facilitate the creation of high-quality products for skin and hair care. Our objective is to simplify formulation processes, ensuring consistency, efficacy, and compatibility with different cosmetic ingredients.

IGCAGEL RANGE

Ready-to-use liquid polymers that enable effective control of the viscosity and rheology of formulations. Their incorporation does not require neutralization or premixing, which simplifies manufacturing processes and ensures stable and reproducible results. These solutions are compatible with oils, silicones, emollient esters, hydroalcoholic systems, and formulations containing UV filters, allowing for a wide variety of applications.
