

DETERGENCY

*Chemical solutions for the production of
detergents and other products for home care and
industrial laundry*

CHEMICAL SOLUTIONS FOR DETERGENCY

At IGCAR, we develop chemical solutions aimed at **improving the performance of detergent formulations** and the **care of fabrics during washing**.

Our range combines solutions to **enhance whiteness, control foam levels,** and **protect garment color**, maintaining detergent efficiency under different washing conditions and on various types of fibers.

We work closely with our customers to **optimize formulations** and **develop solutions tailored** to the technical requirements and performance of each application.

OPTICAL BRIGHTENERS

More than 30 years developing and producing Optical Brighteners for multiple industries.

NEUCOBLANC®

Complete range of optical brighteners in powder and liquid form designed to meet current needs in the detergent market.

- High performance on different types of fibers: cotton, polyester, polyamide, and silk.
- Maintains its effectiveness over a wide range of washing temperatures.
- Offers good stability in systems containing oxidizing agents.
- Cost/performance optimized solutions according to each customer's requirements.
- Technical advice, application studies, and formulation support.

AUXILIARES

IGCANES

Range of defoamers designed for effective foam control in detergent formulations, fabric softeners, and other industrial processes. It provides efficient antifoaming and defoaming action over a wide pH range, with formulations based on vegetable oils, low silicone content, and high biodegradability.

TONAL

Polymers for color care designed to improve the performance of laundry detergents. They help inhibit dye transfer and redeposition during washing, contributing to maintaining the intensity and original appearance of fabrics even after multiple washing cycles.

COMMITTED TO PLANET CARE

At Igcarr, we work to develop solutions that combine high performance with reduced environmental impact. Our commitment focuses on optimizing formulations, improving process efficiency, and contributing to the responsible use of resources throughout the value chain.

The solutions from our detergency division are developed considering regulatory compatibility and sustainability criteria. Our products comply with REACH regulations and ISO 9001:2015, and we also offer a selection of products with ECOLABEL certification, facilitating their incorporation into formulations aligned with current environmental standards.
